EYE-TAP: Collaborative Fixations-to-Word Annotation for Multilingual Eye-Tracking Data

Place and time:	<i>Remote & Asynchronous</i>
Contact person for questions:	<i>pfranosch@ethz.ch / jahutz@ethz.ch</i>
Data Protection Officer ETH Zurich:	Tomislav Mitar (tomislav.mitar@sl.ethz.ch)

We would like to ask you if you are willing to participate in our research project. Your participation is voluntary. Please read the text below carefully and ask a contact person about anything you do not understand or would like to know.

What is investigated and how?

This study explores the human annotation of eyetracking data. Source of the eyetracking data is human readers of different texts. For that purpose, we introduce EYE-TAP, an online platform for collaborative human annotation.

We aim to understand, if and if so, by how much our proposed platform improves the quality, user experience, and speed of human annotation. Throughout the survey, participants are asked to annotate eyetracking data using the EYETAP platform. The research will aim to improve the data curation of eyetracking data in the field of computational linguistics.

Who can participate?

Participants must be at least 18 years old and fluent in English. You should have access to a computer with a stable internet connection, installed a web browser on your device, and have a screen resolution of at least 720x1280 pixels (laptop or desktop, no mobile devices supported).

What am I supposed to do as a participant?

Your participation involves a single 25-minute session, first annotating eyetracking data using the Eye-TAP platform for 20 minutes, afterwards you will fill in a workload survey for approximately 5 minutes. The session can be started at any time you like, but should be completed in one go. You get assigned to one of three groups. In the first group, you will annotate eyetracking data with no support of the platform. In the second group, you will annotate eyetracking data with some support of the platform. In the third group, you will annotate eyetracking data with full support of the platform.

Irrespective of your assigned group, after your annotation session is over, you will fill in a workload survey.

What are my rights during participation?

Your participation is completely voluntary. You may withdraw from the study at any time without providing reasons and without any negative consequences. Even after the submission of the workload questionnaire, you may request deletion of your data by contacting the research team.

What risks and benefits can I expect?

Risks are minimal. There are no physical risks. Benefits include contributing to the computational natural language processing community, by assessing the quality of human-in-the-loop data annotation approaches.

Will I be compensated for my participation?

Yes, you will receive the standard compensation provided by Prolific based on the estimated time requirement. Payout is handled by Prolific.

What data is collected from me and how is it used?

We collect identifying data (email for sending out the annotation session invites), demographic information (age, self-assessed english proficiency level), eye tracking annotation data, and survey responses about the workload during the annotation process. Your identifying information will be separated from your research data immediately after collection. All research data will be pseudonymized using participant codes. Only anonymized data will be used in analysis and publications.

Data is stored on secure, password-protected servers accessible only to the research team. The link between your identity and your data will be destroyed at study completion, making re-identification impossible. Results will be published only in academic venues in fully anonymized form. We comply with all applicable data protection laws including the Swiss Federal Act on Data Protection (FADP).

The members of the ETH Zurich Ethics Committee may inspect the original data for audit and control purposes, subject to strict confidentiality.

Who is funding the study?

This research is funded by IVIA-Lab at ETH Zurich with no external or commercial funding sources.

Who reviewed the study?

This study was reviewed and approved by the ETH Zurich Ethics Committee under application number [XX ETHICS-YYY](#).

Complaints office

The secretariat of the ETH Zurich Ethics Committee is available to help you with complaints in connection with your participation in the study. Contact: ethics@sl.ethz.ch or 0041 44 632 85 72.

Consent Form

I, the participant, confirm by my signature that:

- I have read and understood the study information. My questions were answered completely and to my satisfaction.
- I had enough time to decide about my participation and am taking part in the study voluntarily.
- I fulfil the stated conditions for participation and am aware that the stated requirements must be met.
- I consent that the data described above may be collected from me and used as described.
- I know that I can cancel my participation any time.

I would like to be informed about the results of this study

- ☐ Yes, name, phone number or e-mail:
- ☐ No
